

June - 2015

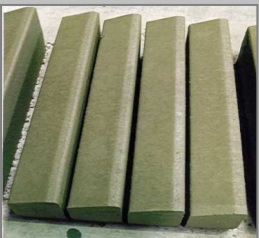

*Various concrete Products made with Teksam Dual Station*

Manhole Bases

Utility Boxes

Curbstones

*For details, please have a look at the "Dual Station" Brochure*

**Welcome** to the 4th issue of Teksam INFO!

In this edition, we focus on the **"Teksam 1250 Dual Station"**, which has been developed in close cooperation with our customers.

Focus has been on the producers who requires a versatile system that is capable of producing a variety of mid-size products ranging from Grade Rings - through 48" Manhole systems.

The variable vibration technology enables production of both flat products, like Slabs and Grade Rings, and the production of Risers, Bases and Cones in the 48" diameter range.

On the **"Teksam 1250 Dual Station"** we introduce the "height adjustable" Belt Feeder with a "quick change" Concrete Distributor. These features makes it possible to produce different types of products, on 2 Vibration Stations, with 1 common Belt Feeder.

This means that The Dual System has the capacity to produce up to 120 cycles per 8 hours shift!

These and many other benefits have resulted in an increasing number of **"Teksam 1250 Dual Stations"** already successfully installed - worldwide!
