Concrete Products

.....Our mission is to provide high quality equipment that can be built from standardized modules to meet customers' specific requirements.....

Teksam **"Production Stations"** are known for their versatility as each **"Production Station"** has the capability of dry-casting several different types of concrete products within a weight range.

Teksam **"Production Stations"** includes a number of standardized modules that combined provides a complete station.

The modularization principle makes it easy to provide customized **"Production Stations"** to meet customers' individual requirements without additional engineering.

Teksam **"Production Stations"** are available with different degrees of automation and can as such be automated to match customers' individual requirements.

Teksam dry-cast concrete products produced on Teksam "Production Stations"

Hog Slats

Baffles for Septic Tanks

Adjusting Rings

Arena Benches

Road Sign Bases

Manhole Risers

Median Barriers

Guard Rail Posts

Solar Cell Bases

More than 30 years of experience

Teksam engineers and builds high-performance equipment for the dry-cast concrete industry. Founded in 1979 in Denmark we have been supplying equipment for more than 30 years.

Our innovation systems and dedication to serve our customers have made us the preferred supplier of machines and equipment for pre-cast companies globally.

Machines and molds built to meet your requirements

Through time Teksam has obtained a solid reputation for innovative engineering and the ability to provide machines and equipment that match our customers' requirements for standard as well as custom made equipment.

Our dealers, agents and employees work closely with our customers throughout the entire project to ensure fully satisfaction.

Why?

The foundation for this success is the **vibration technology** that Teksam has enhanced and engineered to create denser and more uniformly consolidated products. Teksam unidirectional vibration technology has infinitely adjustable amplitude and frequency making them superior to other technologies.

To meet customers' requirements for tailor-made equipment Teksam machines are built from standardized modules which can be combined to form a very comprehensive program in "Product Stations" that has proven their efficiency world wide.
